case study · ecommerce

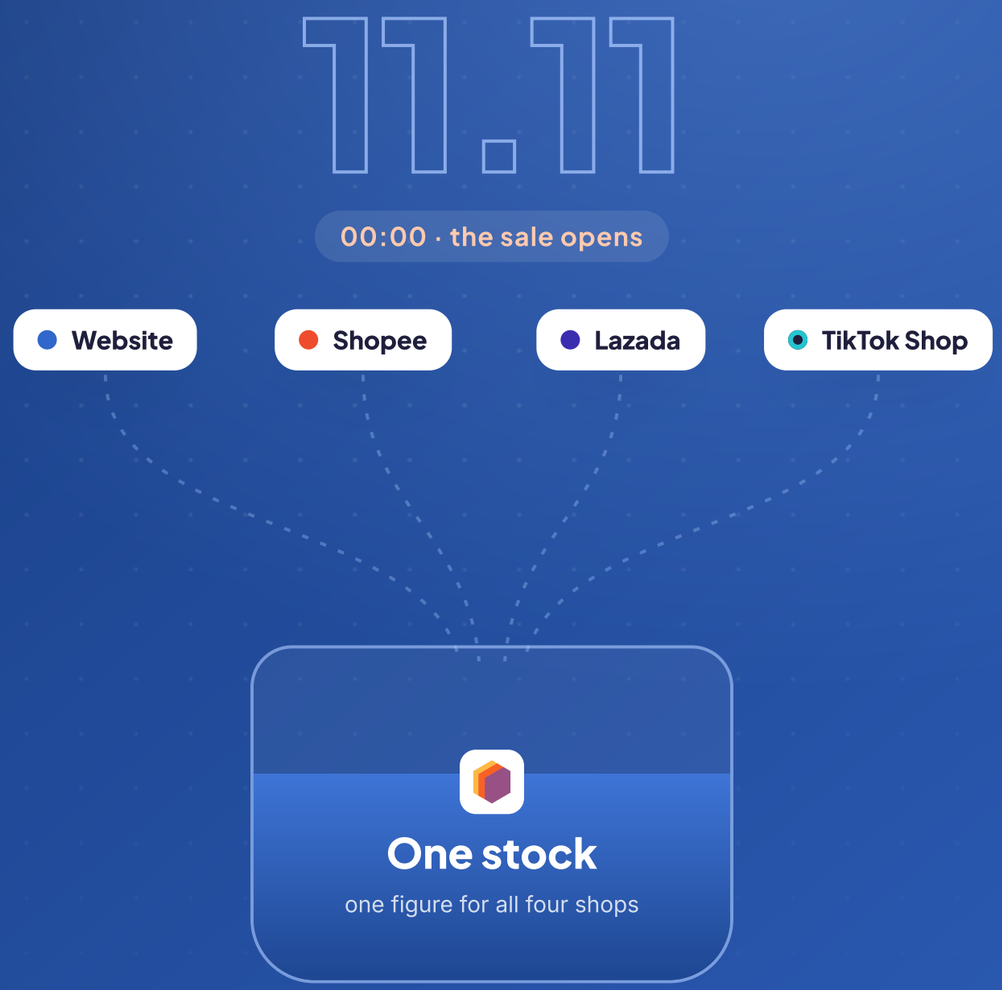

Four shops, one shelf.

A Singapore skincare brand selling on its own website, Shopee, Lazada and TikTok Shop from one warehouse. What 11.11 did to it, and how Odoo 20 untied it.

why it is hard

Four knots, pulled tight at once.

1

Every update by hand is already late

Normal Tuesday | **11.11, midnight**

Serums sold a minute, all shops — 12

Minutes to update four seller centres — 25

300 serums sold on an old number during one update, with **600** on the shelf

2

Gift sets hide what they use

Glow Trio
210 sold

→

Serum	−210
Toner	−210
Cream	−210

Listed as its own product with its own count, so 630 units left the shelf **without touching** their numbers.

3

Money arrives net, and weeks later

Sold, 11–17 Nov	**S$18,640.00**
Banked, 25 Nov	**S$15,088.20**

Commission, fees, vouchers and refunds come off **before** the money arrives, in one lump per payout. The books never match the bank.

4

Returns go straight back on the shelf

Parcel back	On the shelf
Sold again	Complaint

No check, no reason recorded, and the refund lives only in the marketplace, so stock and money **both drift.**

website customers

1. One on-hand figure per product, in one warehouse, read by every shop front.

2. Gift sets are kits: selling a Glow Trio takes a serum, a toner and a cream.

3. The website reads stock directly; the connectors send stock levels back out to each marketplace.

WE DO

Clean the 38 products so each internal reference matches its marketplace SKU, set up the six gift sets as kits, count the warehouse once, and connect the bank.
