TechNext

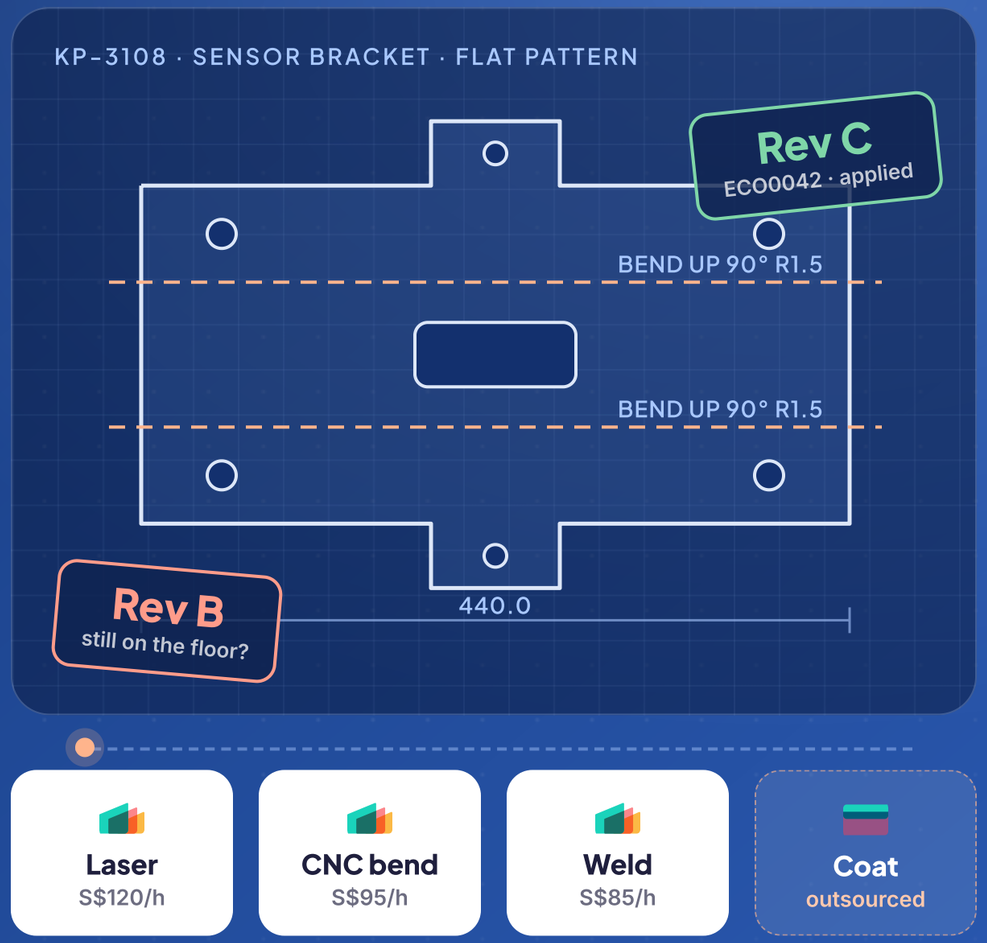

case study · manufacturing

Quoted blind, promised late.

A Singapore sheet-metal shop making to order for electronics and semicon customers. It never knew a job's true cost or its real capacity. How Odoo 20 joined the quote, the machines and the drawing.

01 The problem | 02 The Odoo answer | 03 Rollout

meet the client

300 part numbers, one whiteboard.

Kerrowan Precision
sample company · Singapore

300	active part numbers, made to order
38	customers in electronics and semicon
4+1	work centres, plus outsourced coating
ISO	9001 quality records, in binders
0	jobs costed after delivery

CNC BEND

Runs fine on its own.

RUNS ON
Two press brakes: Bend 1 (3 m) and the smaller Bend 2. The bottleneck.

CAN'T SEE
The set-up minutes per job, or when Bend 1 last had its service.

SO
When Bend 1 stops, the whole whiteboard stops with it.

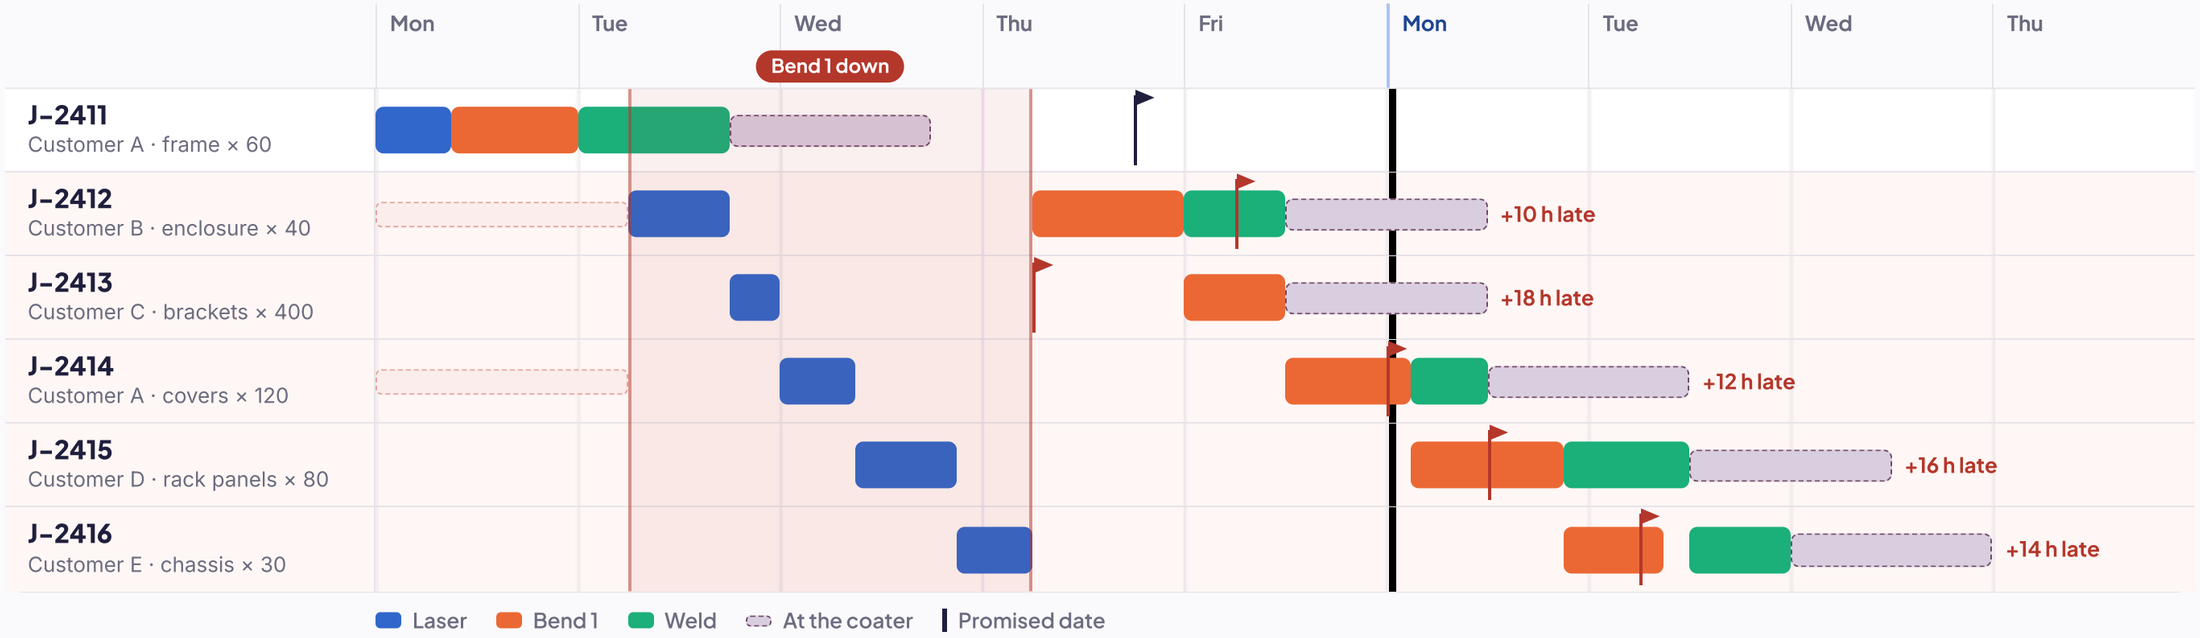

✓ Illustrative composite · sample data

the complicated part

One breakdown, five customers late.

Break Bend 1
Tue 10:00, for 2 days

Steel sheet late
arrives Tue 10:00

ORDERS LATE	CUSTOMERS HIT	HOURS LATE, TOTAL
5 of 6	5	70 h

Found out on the promised day.
Nothing on the board shows a date has gone. Customers learn it when the parts don’t arrive, then sales rings round.

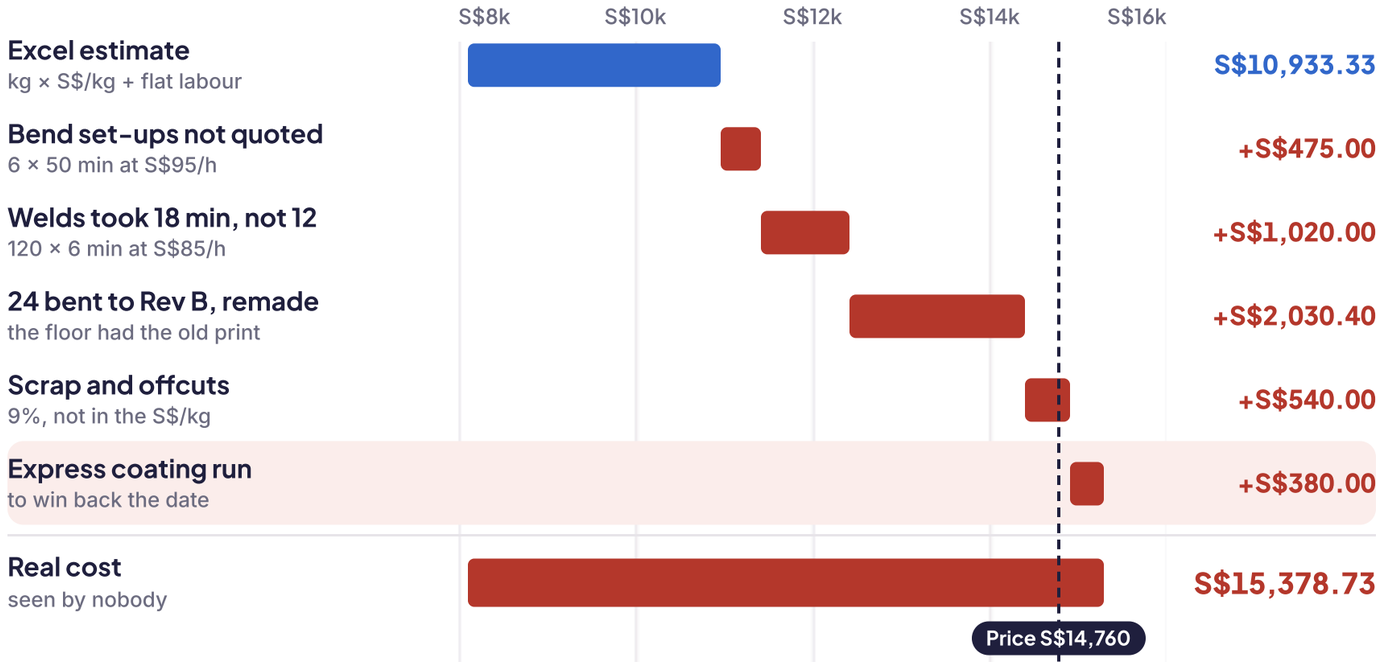

✓ Sample orders and hours

why it is hard

The quote was wrong before the laser started.

→ opens the job's real cost

Job J-2398 · frame for a semicon tool · 120 pcs · quoted at **S$14,760.00**

MARGIN ON THE JOB

−4.2%

as made: a loss of S$618.73

Cost lives in Excel
It knows the weight. Not the set-ups, the minutes or the scrap.

Revisions live on paper
Rev C was emailed to sales. Rev B stayed in the cabinet.

Time lives on a whiteboard
Nothing writes back to the next quote, so the loss is quoted again.

✓ Sample job and rates

the odoo answer

One job, one thread of documents.

PLM

Engineering change order ECO0042

The customer's Rev C goes through Start Revision, review and approval. Apply Changes archives the old BoM, so new orders use Rev C and the shop floor sees its drawing.

REPLACES

Revisions emailed to sales, prints in a cabinet

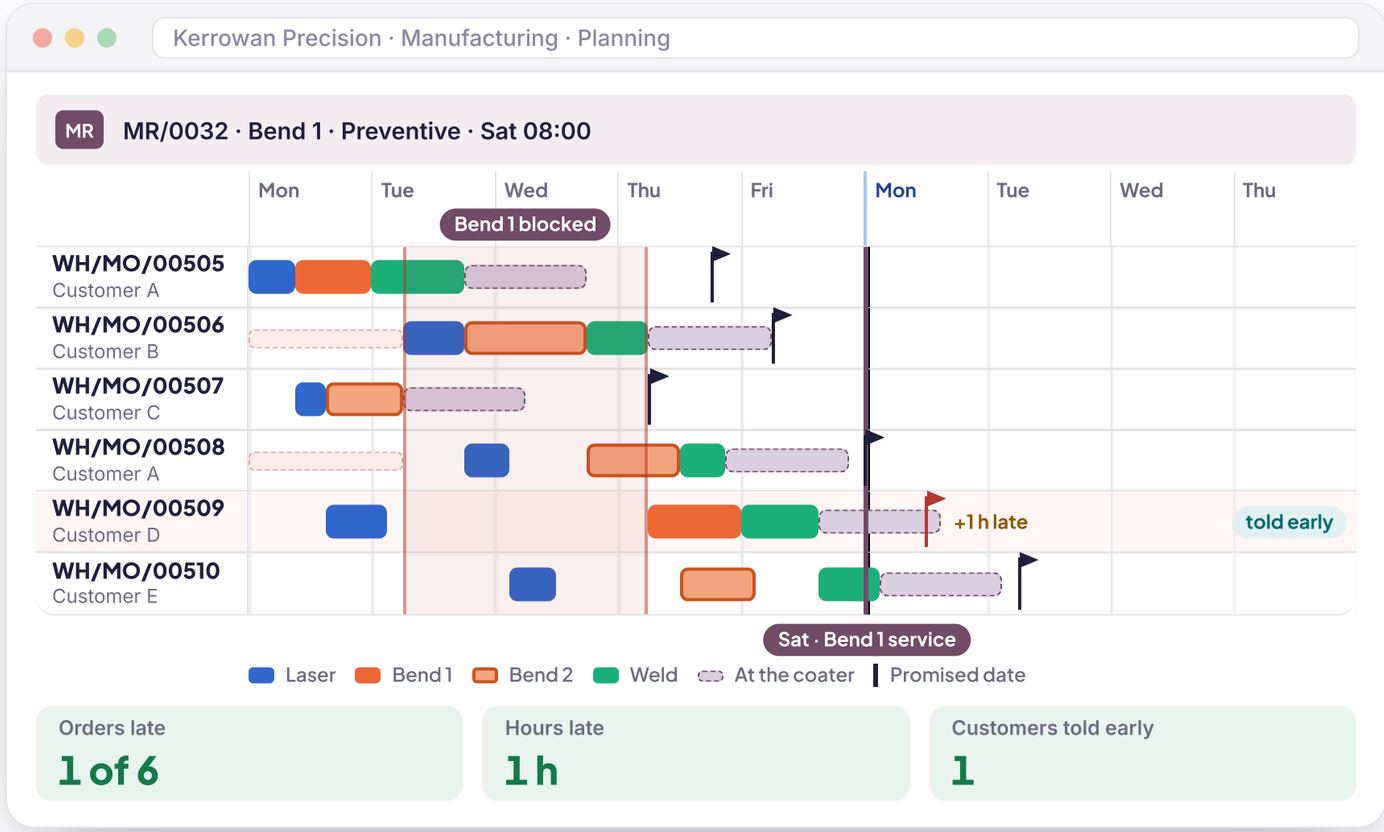

✓ Illustrative · sample references

workflow 1 · capacity

Bend 1 stops. The plan moves.

▶ Play the replan

1. **Maintenance request blocks Bend 1**
   Maintenance · Corrective · Block Workcenter
2. **Plan moves bending to Bend 2**
   Manufacturing · alternative work centre
3. **The late sheet is known on Monday**
   Purchase · laser cuts other jobs first
4. **One customer told, days early**
   Sales · new date on the order
5. **Next time it is planned**
   Maintenance · preventive, on Saturday

WE DO

Clean the 300 part numbers, steel grades and suppliers, count the store, set up the chart of accounts and connect the bank. Everything after this reads them.

✓ DONE WHEN the store count matches Odoo and the bank reconciles for a full month.

~~Stock on a clipboard~~	~~Steel ordered by phone~~	~~Books typed in monthly~~
↓	↓	↓
Stock by location, counted by scanner	Purchase orders with arrival dates	Bank matched as it lands
