TechNext

a walkthrough

What is Odoo?

One suite of business apps on one database. What it is, how it fits together, and one order followed from lead to cash.

odoo Ready Partner Presented by an Odoo Ready Partner

→ or click to begin · O all slides

the problem it solves

Five tools and a spreadsheet, or one order typed once.

Today — Five tools, joined by people

- **Standalone CRM** — no stock view — typed
- **Spreadsheets** — re-keyed every week — typed
- **Stock app** — manual counts — typed
- **Accounting software** — month-end lag — typed
- **Email and chat** — orders get lost — typed

Times one order is typed: 5

With Odoo — One database, every team

- **Sales** — quotation becomes the order
- **Warehouse** — stock reserved, delivery ready
- **Invoicing** — invoice from the order
- **Accounting** — entries post, payment matches

one customer · one product list · one set of books

Times one order is typed: 1

✓ Illustrative sample order

what it is

Business apps that share one database.

A suite of business apps

CRM, Sales, Inventory, Accounting, Manufacturing, HR, Website and more. Each is an app you switch on when you need it.

On one database

Every app reads and writes the same customers, products and accounts, so nothing is typed twice.

Open source at the core

Odoo Community is open source. Odoo Enterprise adds apps, hosting options, upgrades and Odoo's support.

A new version every year

Odoo ships one major version a year and presents it at Odoo Experience in Brussels.

2005
Starts as TinyERP

Then
Renamed OpenERP

2014
Becomes Odoo

2026
Odoo 20, at Odoo Experience

Built by Odoo S.A., a software company from Belgium. Implemented in Singapore, the Philippines and Vietnam by partners such as TechNext.

new in odoo 20

Odoo 20, in six changes.

All six | New | Check before upgrading

NEW

AI agents

Agents create and update records, answer questions about a file and run from automated or scheduled actions. Every AI feature uses Odoo credits.

NEW

An MCP connector

Outside AI tools connect to your Odoo database through MCP, the Model Context Protocol.

NEW

Offline mode

Create, edit, archive and delete records without a connection, and rerun earlier searches.

MOVED

Field Service is now in Planning

The Field Service app is discontinued. Its live map, routing, travel fees, website form and worksheets live in Planning.

CHANGED

Accounting

Parent accounts replace account groups, account codes become optional, and bill lines are suggested from past bills.

CHANGED

Payroll

A dashboard built around warnings, test print of pay runs and net-to-gross simulation. Work entries are removed.

Where we work

Singapore
GST taxes refined to prepare for InvoiceNow, IRAS GST reports, SFRS statements

Philippines
BIR-compliant invoices and ledgers, 2306 and 2307 certificates, a basic payroll package

Vietnam
Circular 99 chart of accounts, the 01/GTGT declaration, SInvoice e-invoices from POS

From Odoo's Odoo 20 release notes. We test what you use on a copy of your database before an upgrade.

the apps

Start with three, add the rest later.

50 apps shown, in **8** areas

- Finance 6
- Sales 6
- Websites 6
- Supply Chain 6
- Human Resources 7
- Marketing 6
- Services 6
- Productivity 7

Accounting
Journals, bank sync, tax reports and closing.

Start here

Invoicing
Send invoices and collect payments online.

Expenses
Capture receipts and approve claims.

Spreadsheet (BI)
Live pivots and dashboards on Odoo data.

Documents
File storage with workflows and OCR.

Sign
Legally binding e-signatures.

Where most of our clients start: Accounting, Sales and Inventory. Every other app joins the same database when a team is ready.

one database

One change, every app sees it.

Click an app to see what it records and which apps react. Nobody exports, imports or re-types.

Sales

RECORDS

Quotations and confirmed sales orders

THEN

Inventory reserves the stock, Accounting can invoice it, and CRM marks the deal won.

the walkthrough

Follow one order from lead to cash.

THE ORDER

Lumen Trading Pte Ltd wants 20 ergonomic office chairs

AT S$312.00 EACH, PLUS 9% GST

S$6,801.60

1

CRM

The lead comes in and moves through the pipeline

2

Sales

A quotation is sent and confirmed

3

Inventory

The warehouse ships the chairs

4

Invoicing

The invoice is created from the order

5

Accounting

The payment lands and reconciles

6

Reporting

Every number is already up to date

Press → to run each step; click the highlighted button in each screen to do it yourself.

STEP 1 OF 6

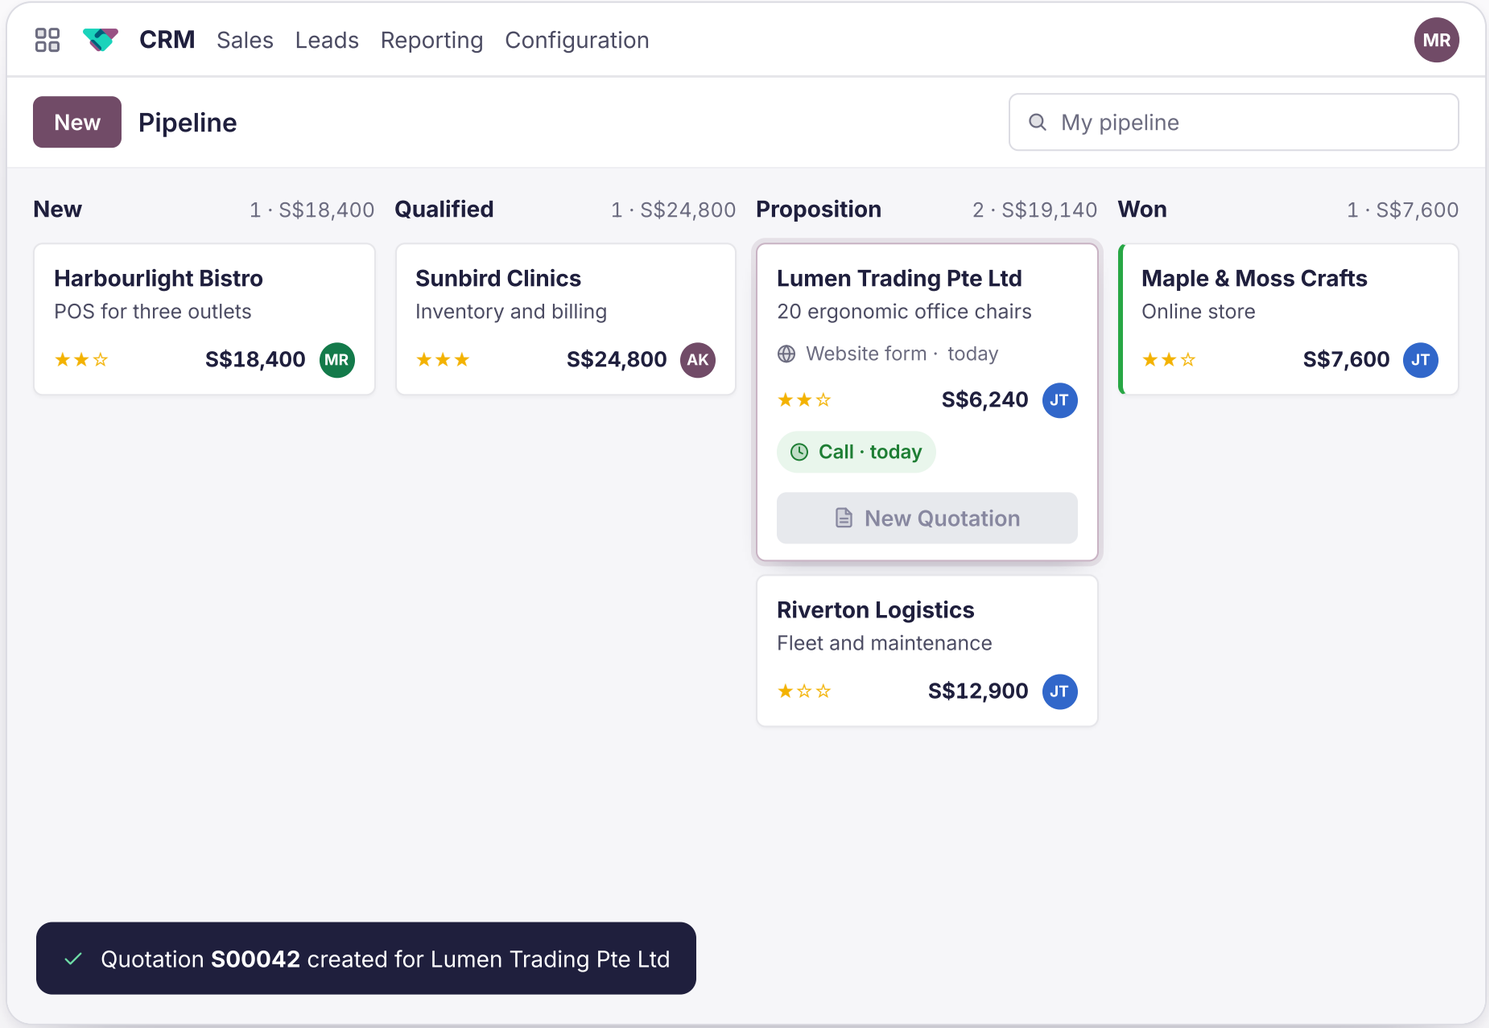

CRM

The lead comes in and moves to proposal.

A request from the website form becomes a lead, assigned to a salesperson by rule, with the next call already planned.

WHAT ODOO DID

- ✓ Created the lead from the website form
- ✓ Assigned it to a salesperson by rule
- ✓ Opened a quotation with the customer filled in

STEP 2 OF 6

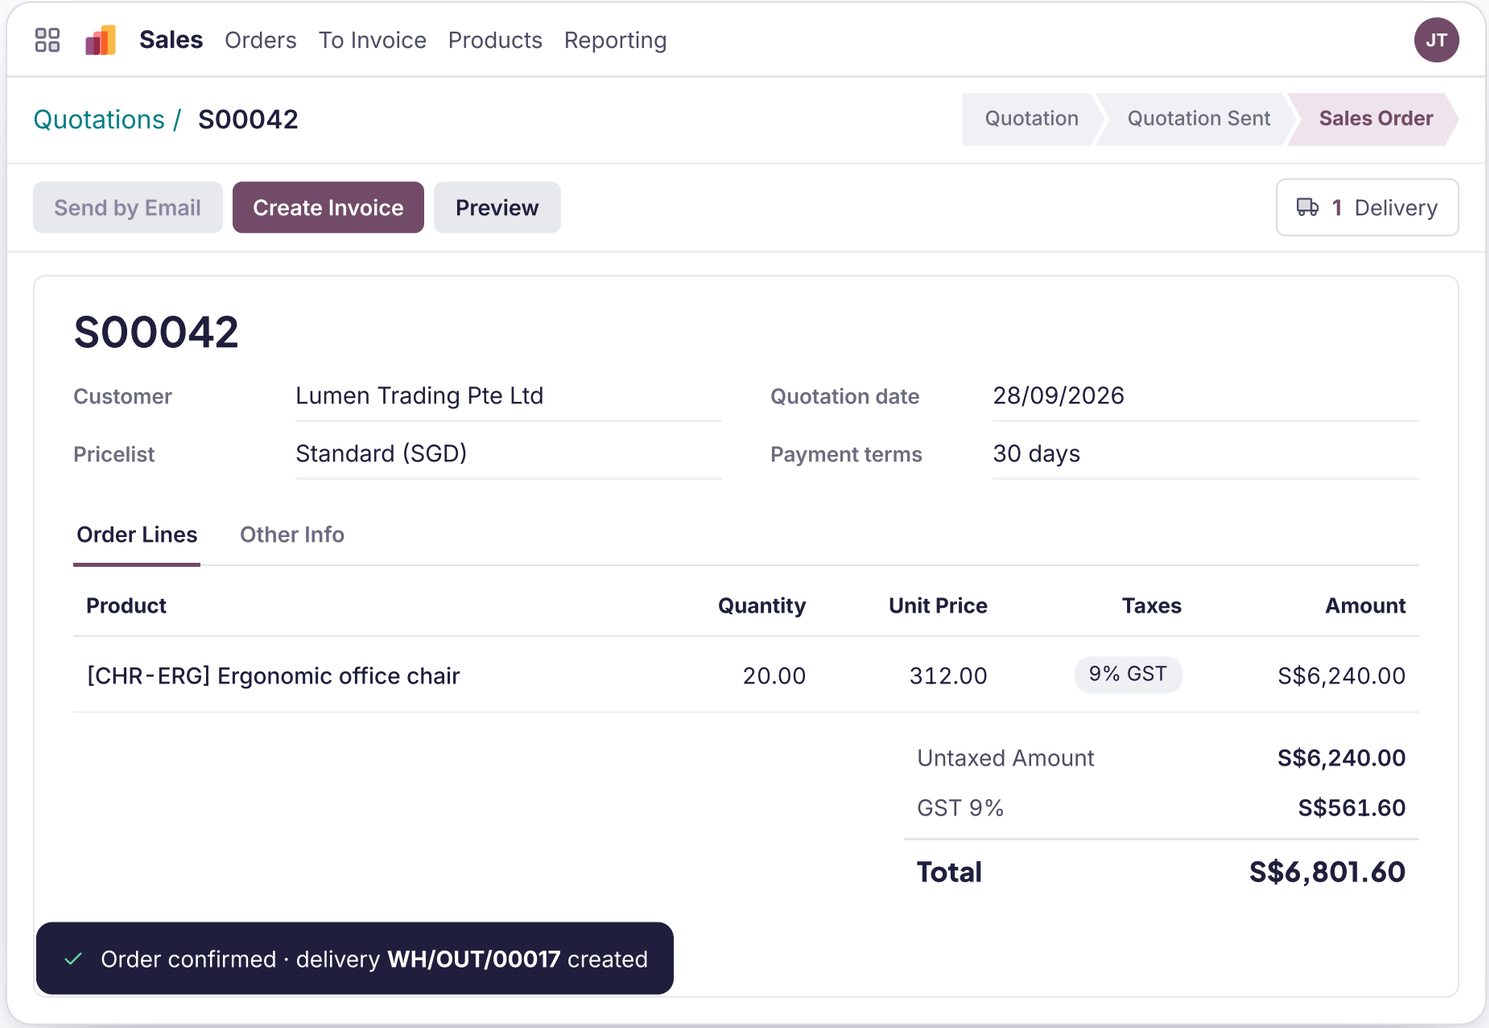

Sales

A quotation is sent, then confirmed.

Prices come from the pricelist and GST from the tax settings. The customer accepts online, and one click confirms the order.

WHAT ODOO DID

- ✓ **Priced it from the pricelist, with 9% GST**
- ✓ **Reserved 20 chairs in the warehouse**
- ✓ **Created the delivery order, WH/OUT/00017**

STEP 3 OF 6

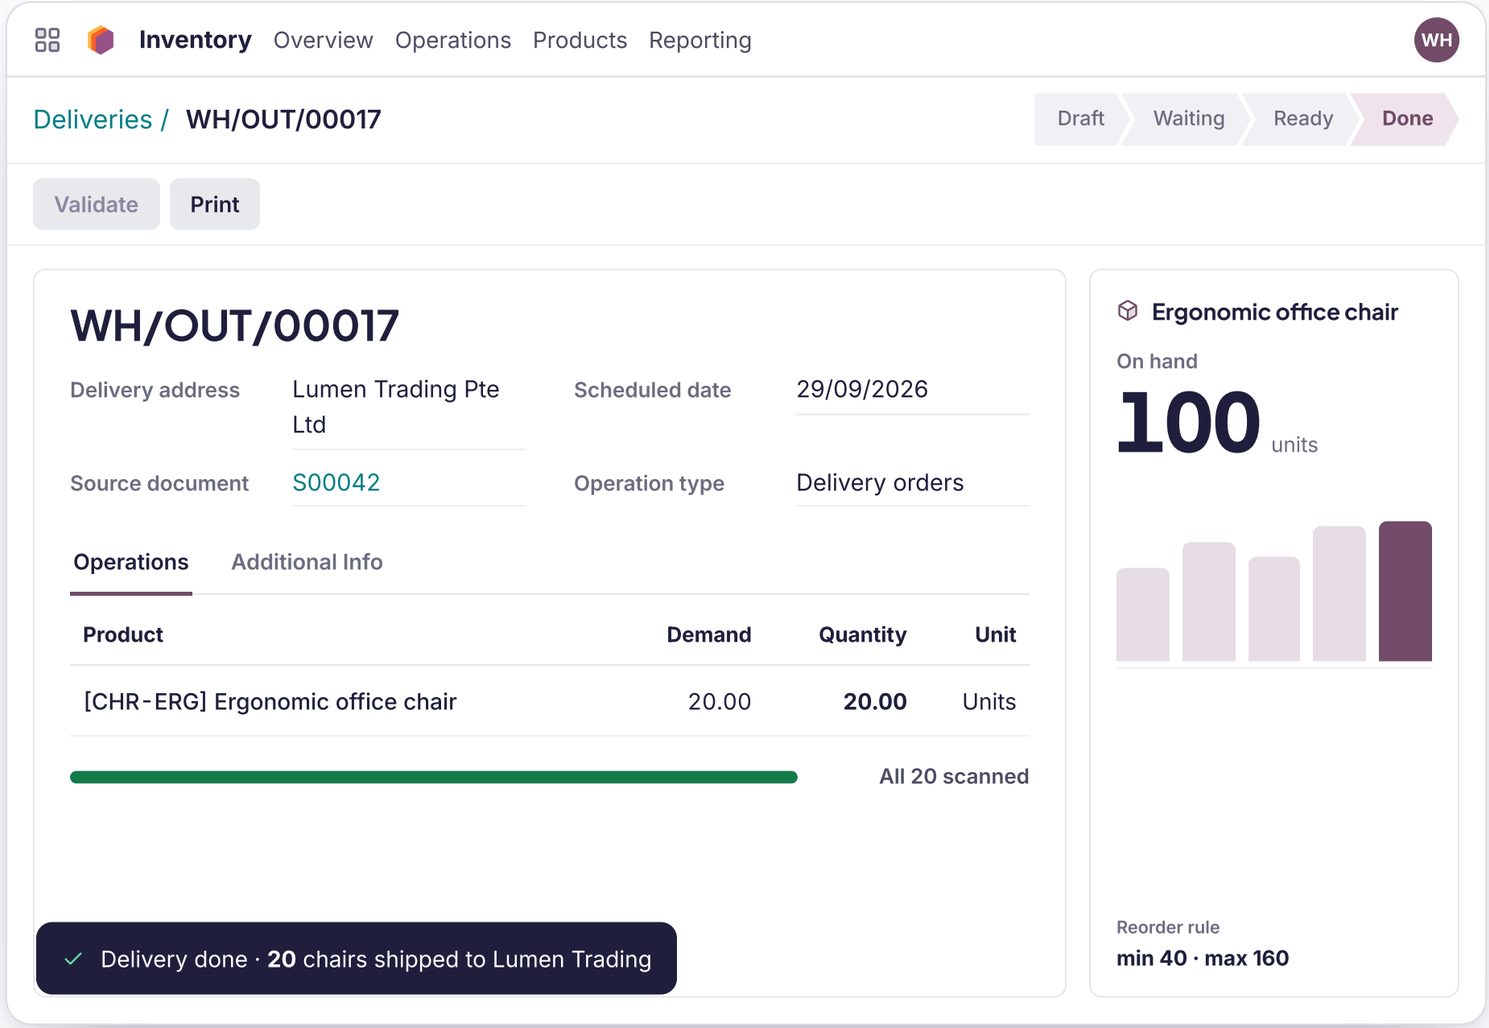

Inventory

The warehouse picks, packs and ships.

The delivery was waiting before anyone asked. The picker scans the chairs, validates, and stock updates on the spot.

WHAT ODOO DID

- ✓ Took 20 chairs off stock the moment they shipped
- ✓ Updated the order's delivery status
- ✓ Made the order ready to invoice

STEP 4 OF 6

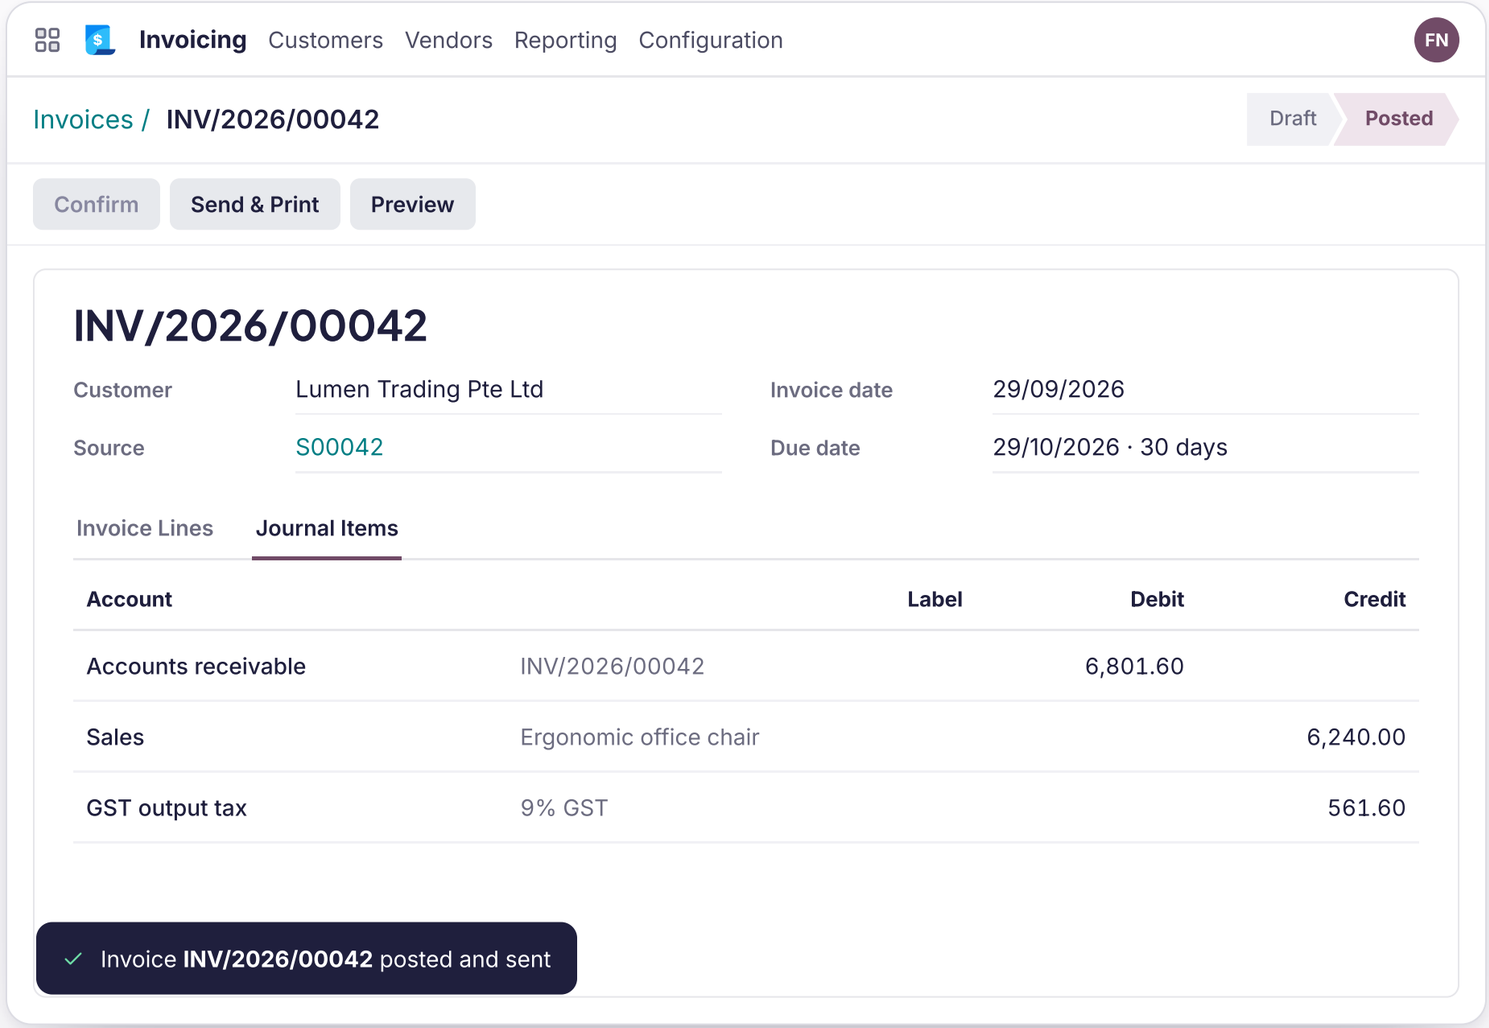

Invoicing

The invoice writes itself from the order.

Every line, price and tax comes from the sales order. Confirming it posts the accounting entries at the same moment.

WHAT ODOO DID

- ✓ Copied every line from S00042
- ✓ Posted receivable, sales and GST entries
- ✓ Sent it to the customer's portal and email

STEP 5 OF 6

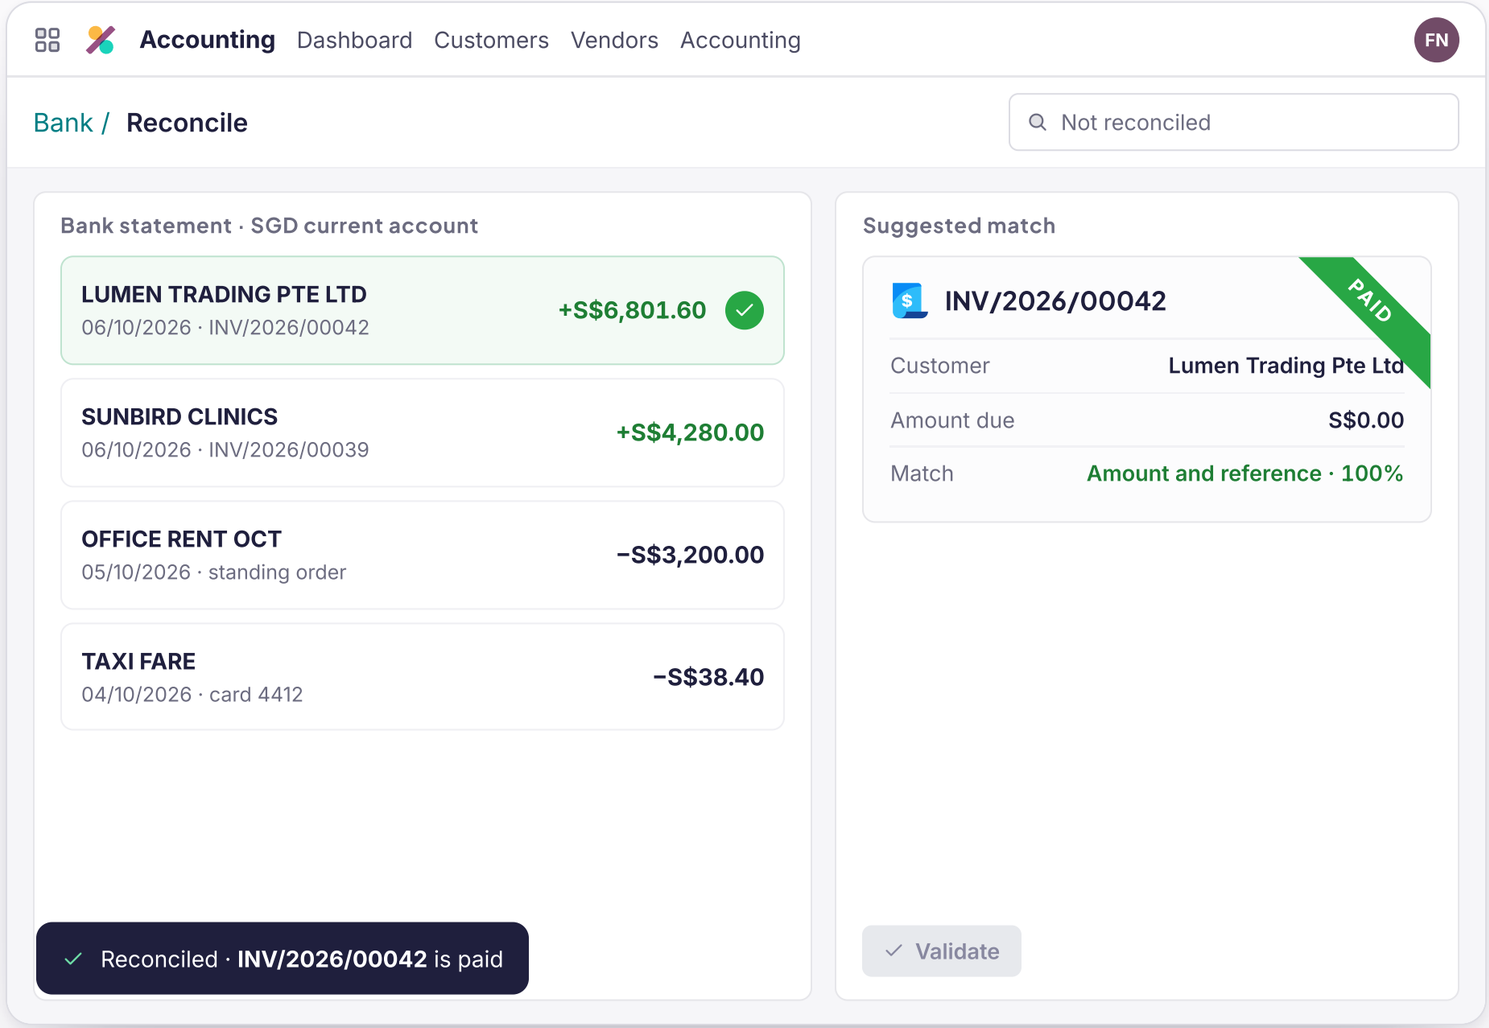

Accounting

The payment lands and matches itself.

The bank line comes in with the statement. Odoo suggests the invoice it pays, by amount and reference, and one click reconciles it.

WHAT ODOO DID

- ✓ Matched the bank line to INV/2026/00042
- ✓ Marked the invoice paid
- ✓ Closed the receivable, no spreadsheet needed

STEP 6 OF 6

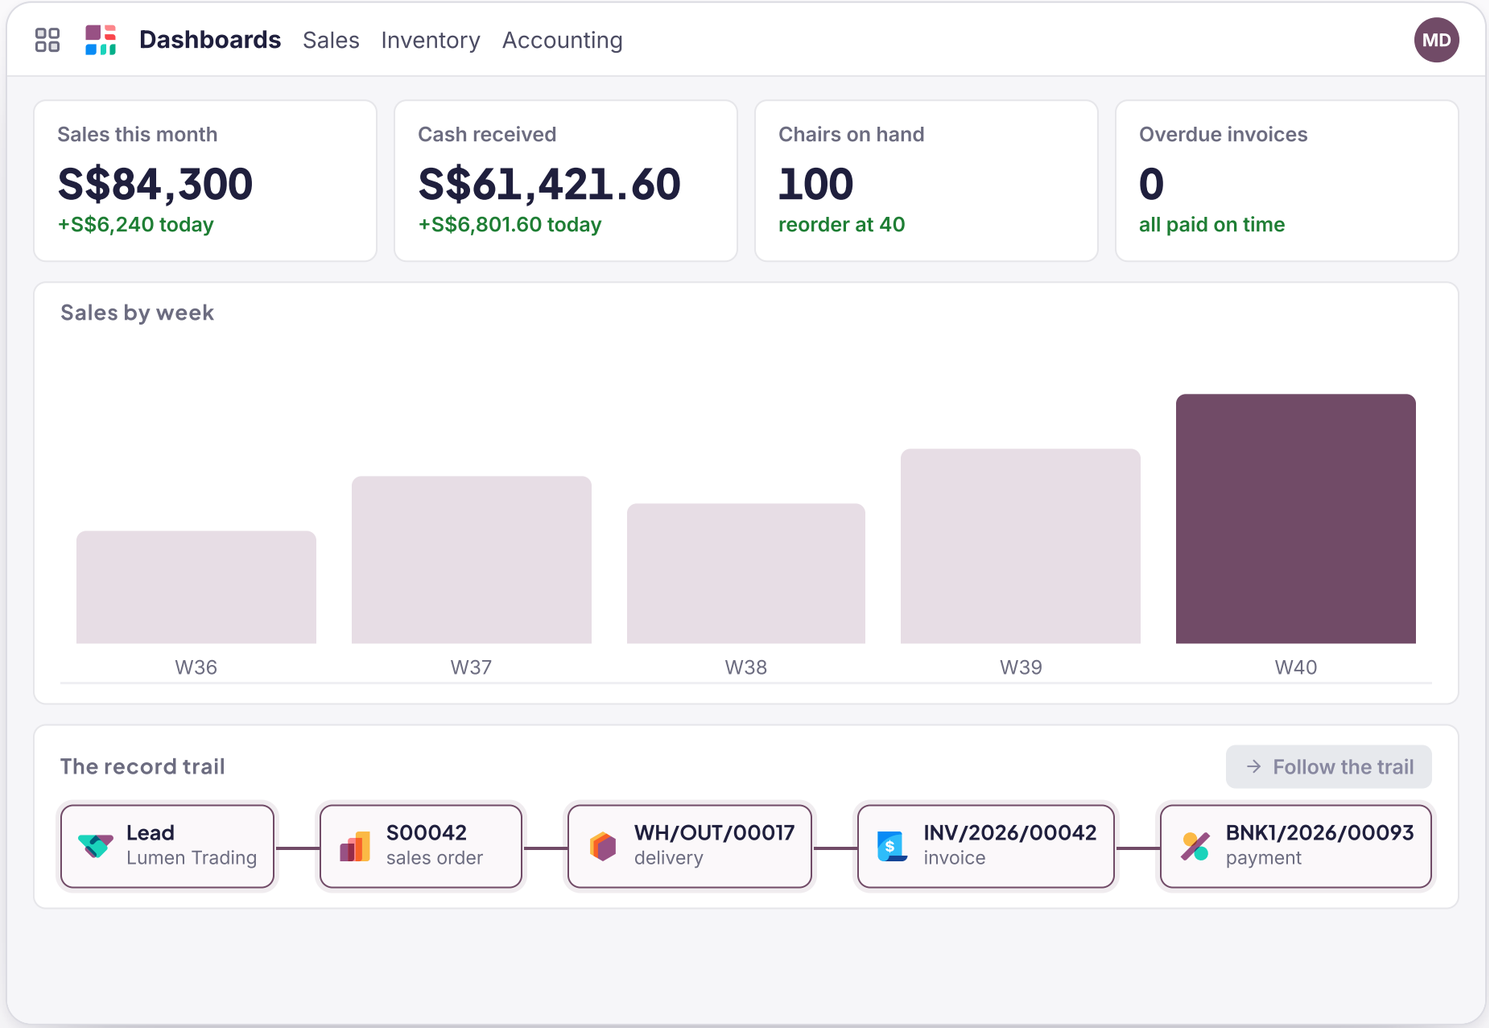

Reporting

Every number, already up to date.

Sales, stock and cash moved as the order did. The dashboard reads the same records, so there is nothing to export or rebuild.

WHAT ODOO DID

- ✓ One order, typed once
- ✓ Five linked documents, one record trail
- ✓ Reports without exports or re-typing

editions

Community and Enterprise, side by side.

Both | Only the differences

Odoo Community

Open source

Core business apps
CRM, Sales, Inventory, Invoicing, Purchase, Manufacturing, Website, eCommerce, Point of Sale, Project

Free to use
under the LGPLv3 licence

You host it
on your own servers or cloud account

Upgrades are yours to run
with your partner or your IT team

Community modules
from the Odoo Apps Store

Odoo Enterprise

Subscription

Everything in Community
the same core apps, on the same database

Plus Enterprise apps
such as Accounting, Studio, Helpdesk and Sign

Hosting options
Odoo Online, Odoo.sh or your own servers

Odoo's upgrade service and support
included in the subscription

Priced per user per month
One App Free, Standard and Custom plans

Plan names and prices change from time to time and differ by country: check odoo.com/pricing for current terms.

where it runs

Odoo Online, Odoo.sh or your own servers.

TWO QUESTIONS

Do you need custom Python modules?

No | Yes

Must it run on your own servers, for IT policy or data rules?

No | Yes

OUR RULE OF THUMB

Start on Odoo Online

Standard apps and configuration cover most first phases, and it is the simplest and cheapest to run.

	Odoo Online	Odoo.sh	On-premise
Who runs the servers	Odoo	Odoo	You
Custom Python modules	No	Yes	Yes
Studio, no-code changes	Custom plan	Yes	Yes
Staging copies for testing	Database duplicates	Built in, as branches	You set them up
Version upgrades	Odoo's upgrade service	Planned, with your code	Planned, fully yours
Best for	Most first phases	Custom modules, integrations	Strict IT or data rules

with technext

Accounting, Sales and Inventory first, then the rest.

WEEKS 1–2

Discover

processes mapped to Odoo apps; the scope written down

WEEKS 3–6

Build

three sprints on a staging copy; your data loaded twice

WEEKS 7–9

Test & train

key users test real scenarios; each team trained on its screens

WEEK 10

Go live

final balances, a planned cut-over, the whole team on hand

AFTER

Run

hypercare, then support and upgrades from the same team

Three apps first

where most of the value is; the rest follow on the same database

Standard before custom

configuration over code; modules only where the process genuinely differs

The same advisers, three offices

Singapore HQ, Taguig City and Ho Chi Minh City, from discovery to support

✓ Illustrative plan · your dates are set in discovery
