

a proposal for hitachi elevator philippines

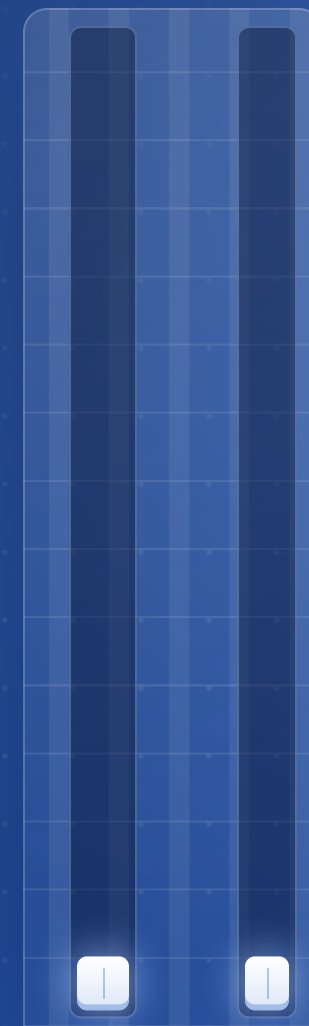

Keep every lift moving, and prove it.

An Odoo service layer for breakdown calls, field visits, contracts and parts, working beside GERP in Makati, Cebu and Cagayan de Oro.

Discussion draft · September 2026

Makati
head office

Cebu
Mandaue branch

Cagayan de Oro
branch

One service desk
every call, visit and contract

what we understand

Fifty-five years of keeping the Philippines moving.

1971

Founded as Hi-Eles Industrial; a Hitachi subsidiary since 2011

NSCR Phase 1

67 units · 7 stations

- Valenzuela
- Meycauayan
- Marilao
- Bocaue
- Balagtas
- Guiguinto
- Malolos

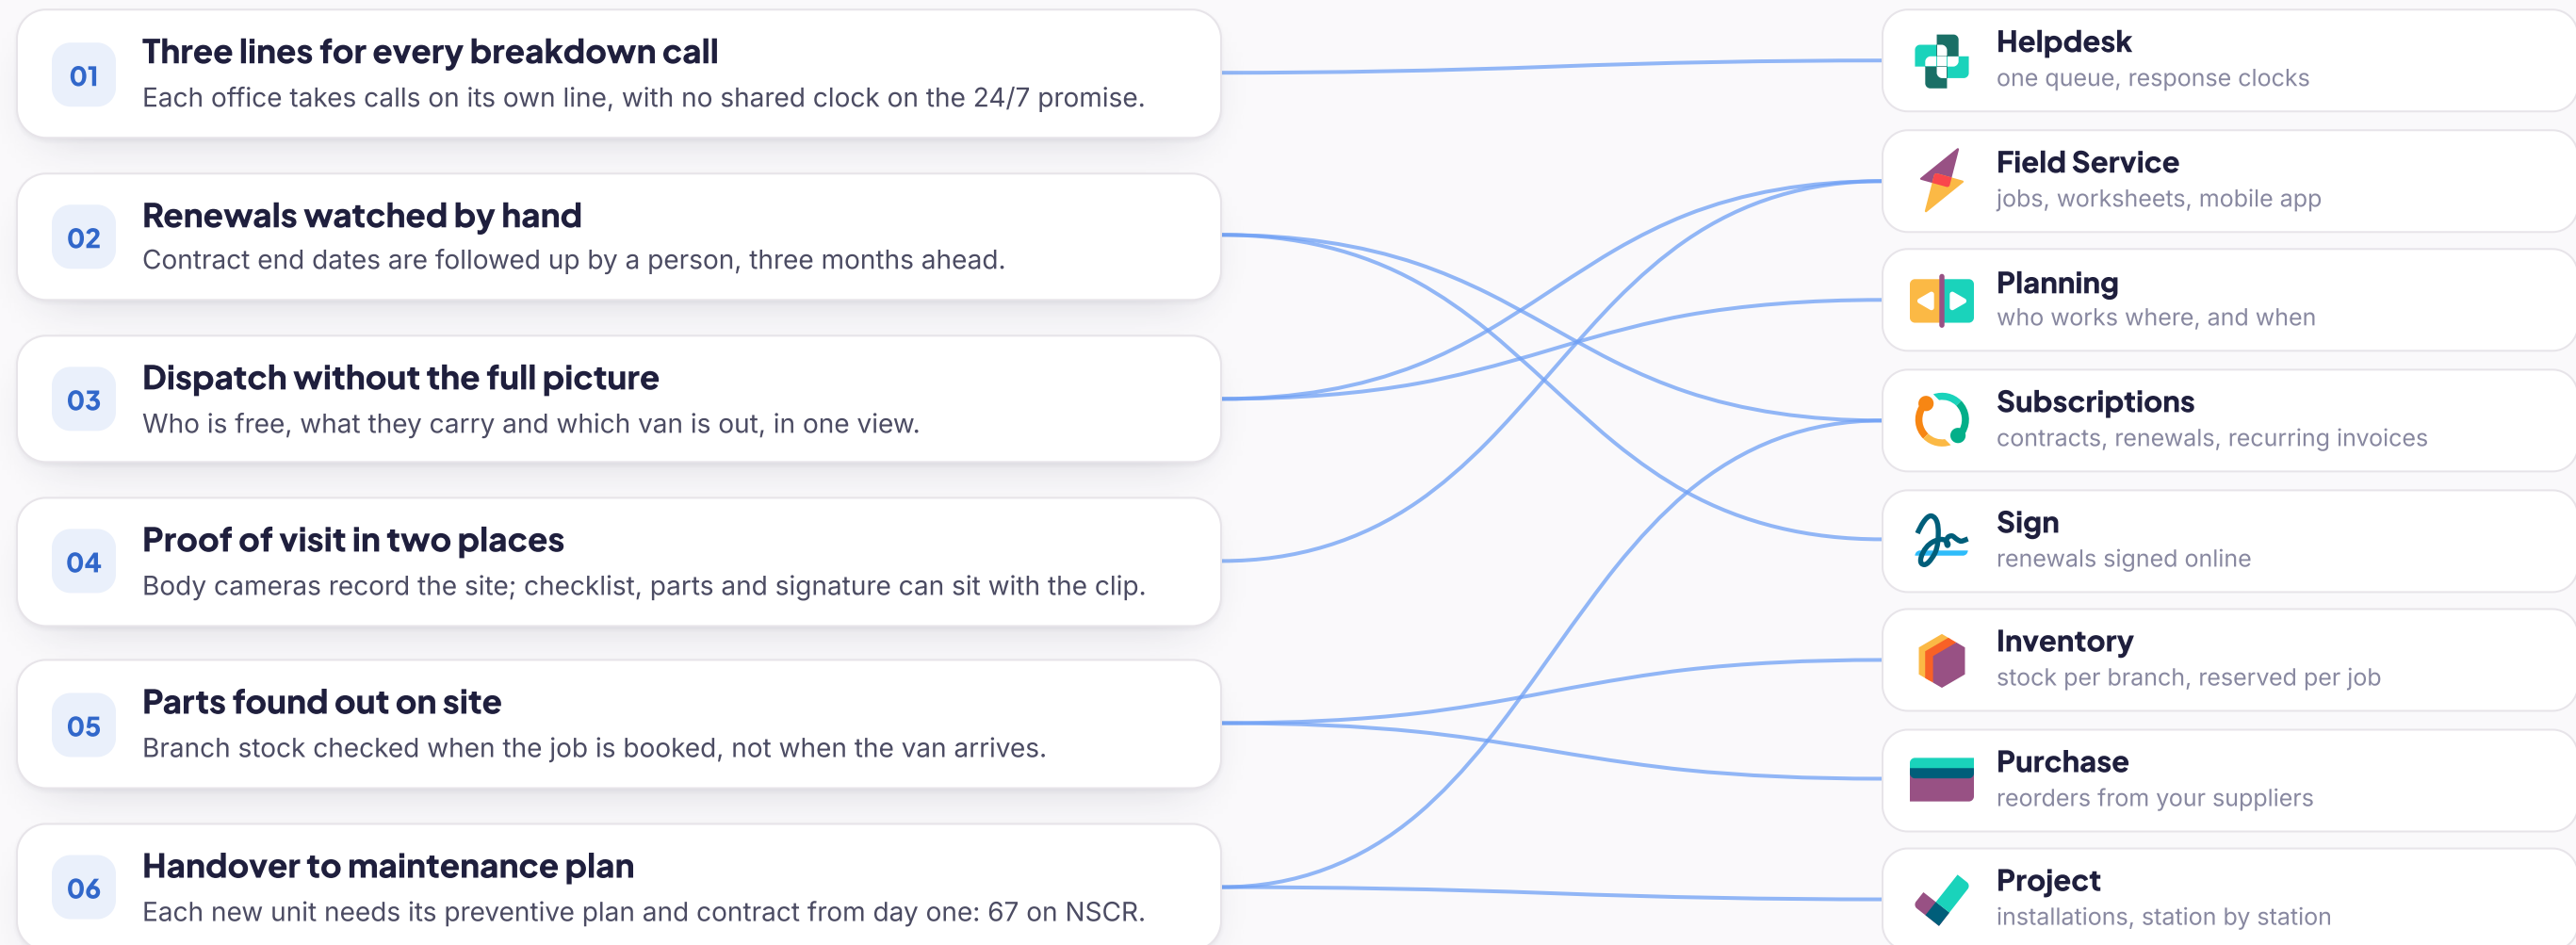

— CP01 · 13 elevators, 26 escalators

— CP02 · 8 elevators, 20 escalators

what we'd like to confirm

Six places where Odoo takes the load.

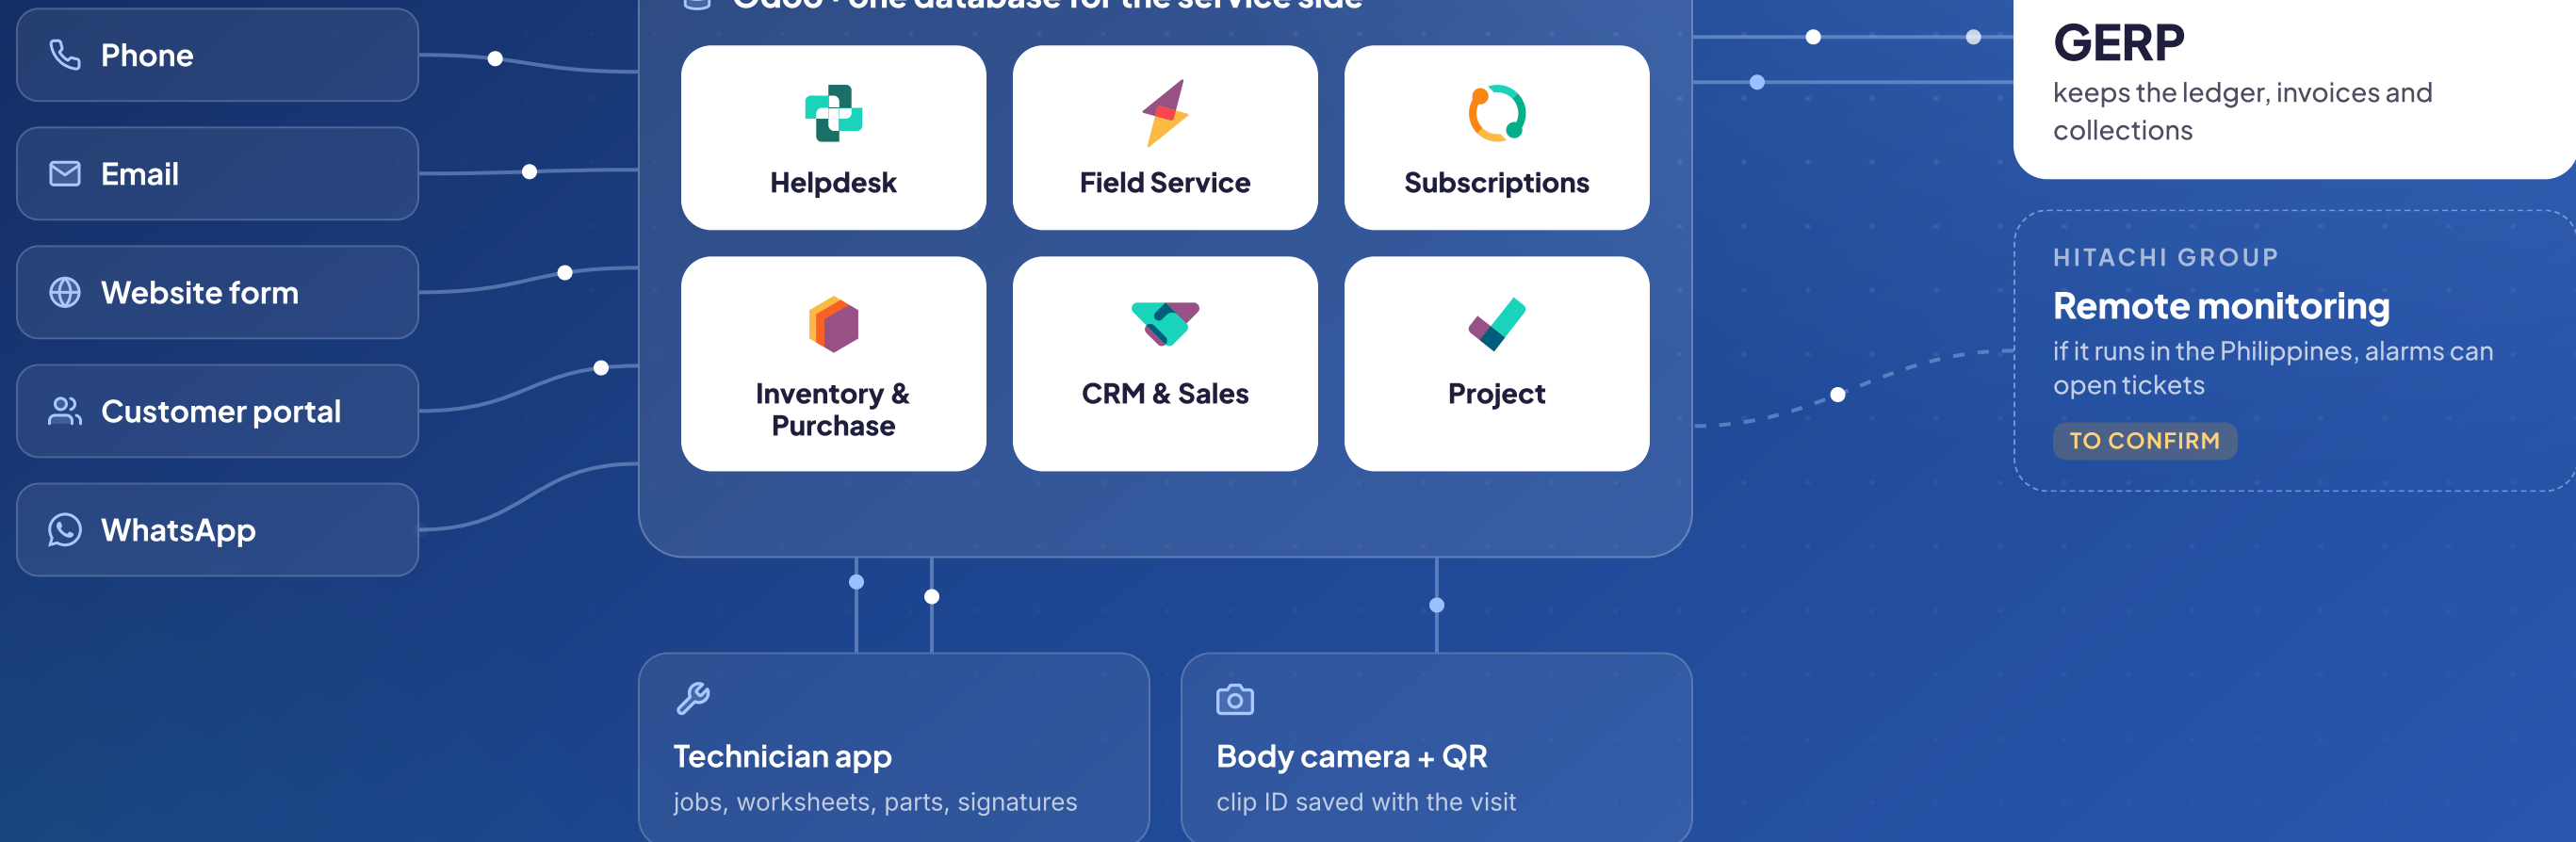

Q Hypotheses from public information, to test with you in discovery. Point at one to follow its line.

how it fits

A service layer beside GERP, not another ERP.

WAYS IN

Click any box. Odoo runs the service work; GERP keeps the books.

Report sent to the building admin

Your cameras stay

The body-camera programme keeps running. Each visit record keeps the clip ID, so footage and paperwork point at each other.

One report per visit

Checklist, photos, parts and the signature become a PDF for the building owner, on the day.

Searchable history

Every unit keeps its visits, parts and faults: the record to show at renewal time.

last 12 weeks

Q Sample figures, to show the view. The real ones come from your first months on Odoo.

the scope

Twelve apps in three phases.

1 · Service core 2 · Sales and buying 3 · Projects and links

Phase 1

Helpdesk
one queue for the three branches, SLA policies, customer portal

Phase 1

Field Service
jobs, worksheets, the technician app, signatures

Phase 1

Planning
technicians' days across branches

Phase 1

Subscriptions
maintenance contracts, renewals, recurring invoices

STAYS WHERE IT IS

 **GERP**
the ledger, invoices and collections

 **Body cameras**
footage stays in your programme

 **Group systems**
governed by Hitachi

Phase 1

Sign
renewals and reports signed online

Phase 1

Inventory
stock per branch and per van

Phase 2

CRM
one pipeline for developers, owners and contractors

Phase 2

Sales
multi-unit quotations, section by section

LINKS WE BUILD

 **GERP interface**
invoice lines out, payment status back

 **Camera clip IDs**
saved with each visit

Phase 2

Purchase
planned orders with supplier lead times

Phase 3

Project
installations, stage by stage

Phase 3

Documents
drawings, test certificates, handover forms

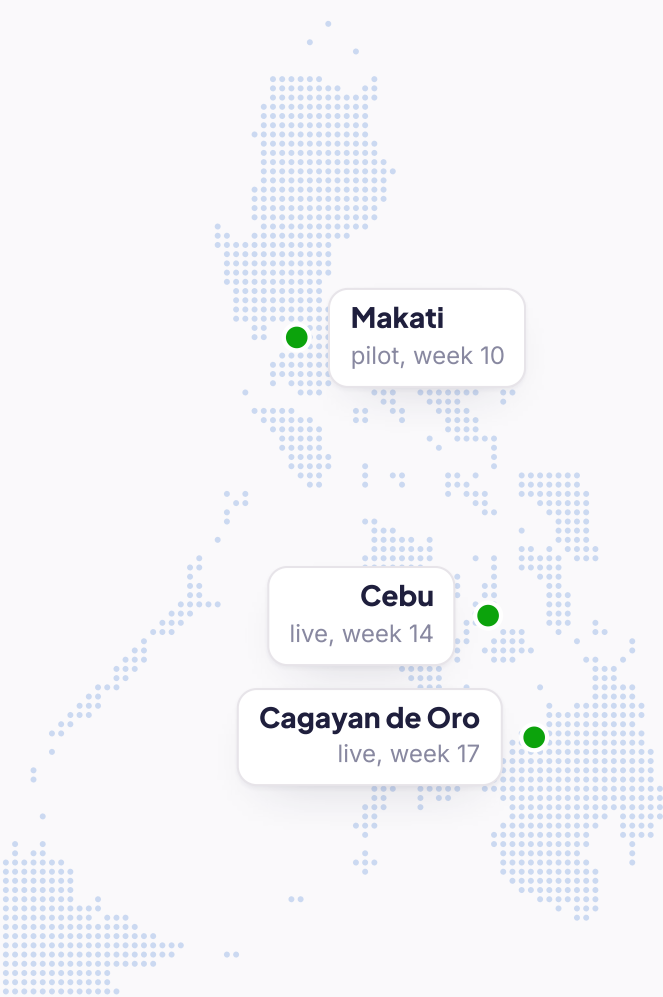

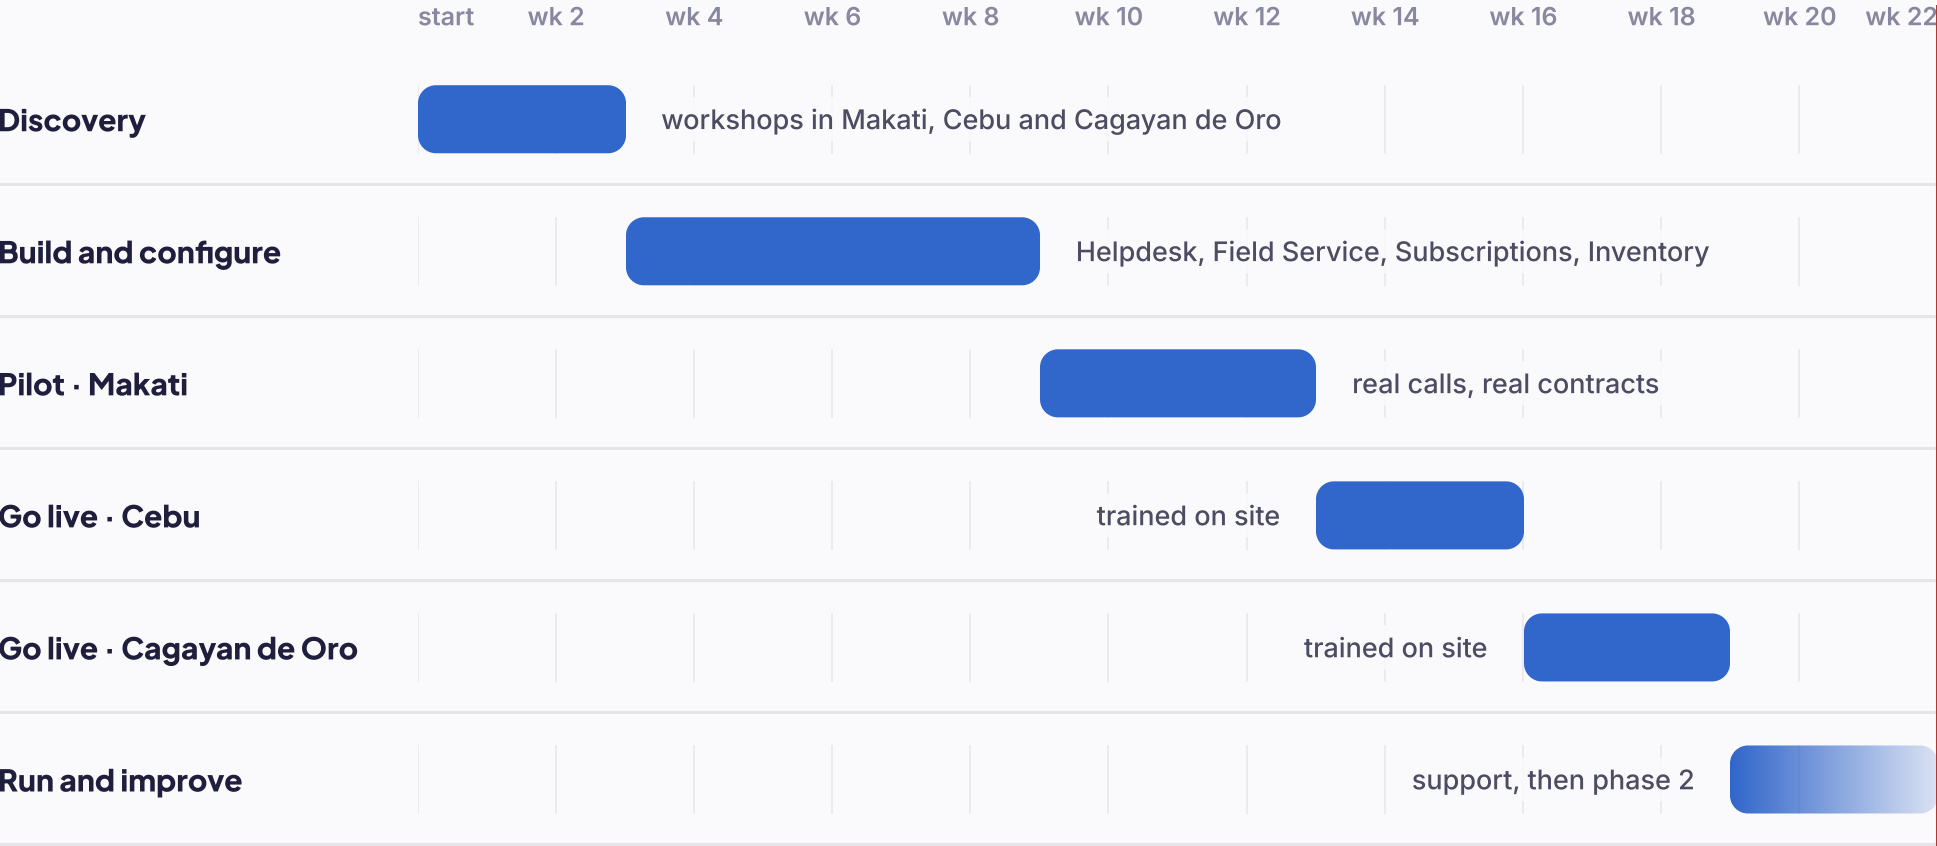

Phase 3

Dashboards
SLA and renewal views for owners

Odoo licences are billed by Odoo per user. Our work is quoted after discovery.

how we'd roll it out

A pilot in Makati, then Cebu and Cagayan de Oro.

Q An illustration in weeks. The plan and dates come out of discovery.

for the discovery workshop

Five questions that shape the scope.

1 What does GERP hold today: finance only, or service contracts and orders too?

It decides whether Odoo takes over a manual process or sits beside an existing one, and how much the interface carries.

2 Where do maintenance contracts and equipment records live now?

That is where the data migration starts: units, sites, contract dates and visit history.

3 Does Hitachi's remote monitoring run in the Philippines?

If alarms exist here, they can open tickets on their own, before anyone calls.

4 What response times do your contracts promise, by priority?

They become the SLA policies the clock runs against, per customer and per contract.

5 Where does body-camera footage go, and who reviews it?

So each visit record can point to its clip, and the review happens in one place.

AFTER DISCOVERY

- ✓ A fixed scope for phase 1, in writing
- ✓ A quotation for our work
- ✓ A pilot plan for Makati, with dates
- ✓ The GERP interface, agreed with group IT

next step

Let's follow one breakdown, end to end.

A half-day workshop in Makati: we map one breakdown call and one contract renewal on your real process, then show both running in Odoo.

 **Book the workshop**
