the entire solution

Your journey onto Odoo, mapped end to end.

One database, eleven applications. The AI Blueprint speeds up the build, and we stay with you after go-live. Click any stage.

01

The modules you'll get.

One database, eleven applications, described in plain English, app by app.

PRESENTS **Jett & Phillip**

IN THIS PART

-  One system, not three >
-  Three phases, eleven applications >
-  Phase 1 · your front office >
-  Phase 2 · the real world >
-  Phase 3 · decisions out of the data >

the big idea

One system, not three.

You are not buying eleven separate programs. You are buying **one database** that eleven applications read from and write to.

🔧 Enter one combi oven once, and every app uses the same record:

🗄️ **Combi oven · serial CO-2417** one record, written by five apps

Sample

SALES

On quotation S00128

price, options, delivery date

INVENTORY

Serial reserved

picked for this order only

FIELD SERVICE

Installed on site

worksheet signed by the customer

MAINTENANCE

Preventive visits planned

service history on the serial

ACCOUNTING

Depreciated monthly

as a fixed asset when it's rented out

Phase 1

Who your customers are, what you sell, how money is recognised and reported to LHDN.

Phase 2

The physical layer: stock, purchasing, technicians on site, service and the hire fleet.

Phase 3

The intelligence layer, last: dashboards and AI are only as good as the data beneath them.

the roadmap

Three phases, eleven applications.

11 applications
in all three phases

AllPhase 1Phase 2Phase 3

PHASE 1
Commercial foundation

Every enquiry, quote, order and invoice in one place, and legally compliant.

CRM

Pipeline and forecasting

Sales

Quoting, product set-up

Accounting

Live double-entry books

SST + MyInvois

Malaysian e-invoicing, inside Accounting

Website

Connected to the system

PHASE 2
Operations

The physical reality: stock, suppliers, technicians and the hire fleet.

Inventory

Serial-tracked stock

Purchase

Procurement and 3-way match

Field Service

On-site work, in Planning

Maintenance

Preventive and corrective

Rental

Rent out kitchen equipment

PHASE 3
Intelligence

Decisions out of the data, built last, on real operating history.

Analytics

Live dashboards

AI Agents

Ask, draft and act

Dashboards and AI read the data phases 1 and 2 create, so they come last.

ⓘ SST + MyInvois is Odoo's Malaysian localisation inside Accounting, so it isn't counted as an app. In Odoo 20, Field Service runs inside Planning.

phase 1 · commercial foundation

The apps that run your front office.

 CRM

Your pipeline, owned by the company

- **Leads to opportunities** on a Kanban board
- **Follow-ups**, expected value and close date
- **Win / loss** and lead-source reporting

Hotel kitchen fit-out

RM 86,000 · Proposal

ML

Mei Ling · reassigned

✓ 12 notes · 3 quotes kept

No deal leaves with a salesperson

 Sales

Quote to cash, one document

- **Reusable templates** and online signature
- **Invoice on ordered** or delivered quantity
- **Customer pricelists** and commissions

Template · Central kitchen

30

lines

RM 212,400

A 30-line quote loaded in seconds

 Accounting

Live books, real margins

- **P&L current to today**, not month-end
- **Margin by business line** (analytic)
- **Fixed assets** for the rental fleet

Equipment		18%
Installation		31%
Service		42%
Rental		27%

Find out which line actually earns

 SST + MyInvois

Compliant by default

- **Submit e-Invoices** straight from Odoo
- **SST-02** from live transaction data
- **Credit and debit notes**, correctly linked

INV/2026/0412

LHDN

MyInvois

✓ Valid · UUID F3K9...QX7

The part that keeps you legal

 Website

Your shopfront, connected

- **Fleet and services catalogue** published from Odoo
- **Enquiry forms** drop straight into CRM
- **Integrated** with the Odoo system

ENQUIRY

2 combi ovens, delivery to Ipoh

New lead in CRM

Every visitor becomes a lead

Q Sample deals, figures and documents, to show each idea. Press → or click a card.

phase 2 · operations

The apps that run the real world.

Inventory

Know every serial number

- **Barcode-based** stock tracking
- **Serials** carry warranty and service history
- **Reserve stock** to a specific build

CO-2415 In stock

CO-2417 Reserved · B-104

 Order S00131 can't take CO-2417

Never sell equipment twice

Purchase

Buy on data, not memory

- **One RFQ to three vendors**, compared
- **Lead times** become quotable dates
- **Three-way match** before you pay

OrderedReceivedBilled

1088

✓ Bill held to the 8 received

Stop paying for short-shipped goods

Field Service

Bill every part and hour

- **Map-based dispatch** and routing
- **Mobile worksheets**, signed on site
- **Parts flow onto** the invoice

Labour, 2.5 hRM 375

Door gasket × 1RM 160

Thermostat × 1RM 245

On the invoiceRM 780

Close the biggest revenue leak

Maintenance

Never miss a service

- **Preventive schedules** generate themselves
- **Fleet checked** before re-hire
- **MTBF / MTTR** reliability by brand

● Preventive

● Corrective

Checked before re-hire

Protect recurring contract revenue

Rental

Availability by date, not count

- **Time-based booking**, no double-hire
- **Automatic late fees** and agreements
- **Margin net** of depreciation

Already booked then

Net of depreciation34%

See true rental profitability

Q Sample serials, quantities and prices, to show each idea. In Odoo 20, Field Service runs inside Planning.

technext.asia

07 / 25

phase 3 · intelligence

Getting decisions out of the data.

Analytics (Dashboards)

Reporting stops being done by hand

- **Live views** for management, service, rental and sales, current as of now
- **Drill from any figure** down to the records behind it
- **Role-based access**; self-service views in a familiar spreadsheet engine

AI Agents

Assistants that act, and ask first

Which rental units are due for service this month?

Three: **RK-07**, **RK-11** and **CO-2417**, from their preventive schedules in Maintenance.

Vendor bill read from a PDF Sample

Cold-room parts supplier · RM 4,820.00 · 3 lines

Proposed, not posted

- **Ask AI and agents** grounded in your own manuals and documents
- **Auto-sort bills**, draft leads, answer questions of your own data
- **Every action is proposed** for you to confirm, never auto-posted

Configured in phase 3 by people who have watched how you actually work. Sample jobs, units and figures.

02

Your accounting, moved safely.

A well-understood, low-risk path from SQL Account to Odoo Accounting, with every figure reconciled before you trust it.

PRESENTS **AJ**

IN THIS PART

-  The honest worries >
-  One clean cut-off >

-  Seven steps to cut over >
-  The runway to the close >
-  Risks and the go / no-go gate >
-  Video · getting paid >
-  What we need from JR-Tech >

before we start: the honest worries

“Will this break our books?” Here's the reassurance.

⚠ THE WORRY

! **We'll lose our history**

! **The numbers won't match**

! **We'll get double-filed with LHDN**
Lembaga Hasil Dalam Negeri, Malaysia's tax authority

! **It will disrupt our current close**

✓ THE REALITY

✓ **SQL Account is archived read-only**, never deleted. Full audit lookup stays available.

✓ **Every migrated total is reconciled** against your closing trial balance before anyone transacts.

✓ **One authoritative filing system per period.** Migrated invoices are locked from re-sending.

✓ **Configuration and clean-up run alongside normal operations.** Only the final cut is tied to the date.

the migration philosophy

One clean cut-off, one system of record.

We move **balances and open items**, not a blanket re-key of history. Account, customer and document codes carry forward.

1

Cut at a period boundary

Let SQL Account close the period cleanly; Odoo opens the next one. No month is ever split across two ledgers.

2

Reconcile before you trust it

Every migrated total is checked against the SQL Account trial balance and aging before anyone transacts in Odoo.

3

Standard Odoo structures

Map to Odoo's standard account types and modules, no custom logic. Familiar codes are configuration, not customisation.

migration scope

What moves, and how.

▶ Run the move again

WHAT	SQL Account	Odoo	HOW
Chart of Accounts	-----	Mapped	Mapped to Odoo account types; your existing codes retained
Opening balance	-----	One journal	One journal at cut-off, from the finalised closing trial balance
Partners (AR / AP)	-----	Cleaned	Masters cleaned, de-duplicated; TINs fetched and validated
Open AR / AP	-----	Open items	Individual open items, aging correct; e-invoiced items flagged
Deposits & credit notes	-----	Open items	Advances and unapplied credits carried as open items
Tax codes / SST	-----	Configured	Configured with the Malaysian localisation, not imported line by line
Bank accounts	-----	Reconciled	Reconciled balance plus outstanding cheques, deposits and PDCs
Stock opening	-----	Qty + value	Opening quantity and valuation; costing method aligned first
Fixed assets	-----	Cost + dep.	Gross cost plus accumulated depreciation, so schedules continue
Document numbering	-----	Continues	Odoo sequences continue from the last SQL Account numbers
Prior-year detail	🔒 Archived -----		Stays as a read-only archive inside SQL Account
Out of scope: SQL Payroll is not migrated. Its history stays queryable in the archived SQL Account.			

migration process

How we migrate and cut over, in seven steps.

Step 7 · Reconcile & go-live At the cut-off

TB = TB

Aging = aging

Bank = bank

🔒 SQL Account frozen

Nothing disrupts your current close. Configuration happens while SQL Account carries on as normal. Only the final extract, import and reconcile are tied to the cut-off.

the recommendation

Cut over at the close: here's the runway.

No long parallel run. Double entry across two systems adds errors, not safety, and SST / e-Invoice filings must come from one authoritative system per period. Instead: a four-week confidence window after go-live.

risk register

Every risk has a control, and a go / no-go gate.

RISK

A mid-period cut-over splits transactions

- ✓ **Cut over exactly** at the close date, never before it.

RISK

Bank items or deposits left out of opening

- ✓ **Listed and signed off** together with the aging.

RISK

SST / e-Invoices filed from both systems

- ✓ **One authoritative filing system** per period; no overlapping LHDN submissions.

RISK

Chart of Accounts mismatch

- ✓ **Mapping sheet reviewed and signed off** before any import runs.

RISK

Missing TINs cause MyInvois rejections

- ✓ **TIN and classification completeness** checked in cleansing, before import.

RISK

Migrated invoices re-sent to MyInvois

- ✓ **"Already e-invoiced" flag** plus the stored UUID; the send action is blocked.

GO / NO-GO AT THE CLOSE

Go

All five passed: cut over

Trial balance reconciles

Aging reconciles

Stock reconciles

Bank reconciles

MyInvois test passed

▶ **Run the gate**

 **Owners named at every gate:** the Finance Lead signs the mapping sheet and the reconciliation pack; the go / no-go at the close is joint, only when TB, aging, stock and bank reconcile and the MyInvois test has passed.

pre-migration checklist

What we need from JR-Tech.

✓ Tick what's done, in the room.

- ☐ **Confirm SQL Account version** and edition; hand over a full database backup
- ☐ **Sign off the Chart of Accounts** and the tax-code mapping sheet
- ☐ **Authorise Odoo S.A.** as MyInvois intermediary on MyTax
- ☐ **List all open AR / AP**, deposits, credit notes and unreconciled bank items
- ☐ **Confirm TINs** for active B2B customers and suppliers; product and MSIC codes
- ☐ **Confirm the last document numbers** so Odoo sequences continue without gaps
- ☐ **Agree the cut-over date in writing**, tied to the exact close date
- ☐ **Nominate a Finance Lead** and two UAT testers; attend staging training
- ☐ **Generate MyInvois API credentials** (pre-production and production)
- ☐ **Reconcile the opening trial balance** before anyone transacts
- ☐ **Confirm the Malaysian localisation** (SST + MyInvois) is enabled in Odoo
- ☐ **Archive SQL Account, don't delete it**, once sign-off is given

Twelve things only JR-Tech can do. Most are one-off confirmations.

03

Support after go-live.

We don't disappear at go-live. A four-week confidence window, a formal trust sign-off, then ongoing support as you grow.

PRESENTS **Sky**

01

Current books in SQL Account
 What we are migrating from

0 / 5 answered

1.1

Which **SQL Account version and edition** (desktop or cloud), and who supports it: in-house or a reseller?

☐

1.2

How many **companies / databases** are kept? Will the Penang fabrication plant be its own company or a branch after consolidation?

☐

1.3

What is the **financial year-end**, the date of the close now in progress, and is it audited?

☐

1.4

How many **years of history** must stay searchable, and does the auditor need any detail moved, or only balances?

☐

1.5

Which modules are used today: **stock, fixed assets, multi-currency, SQL Payroll**, project costing?

☐

02

Chart of Accounts & tax
 SST and LHDN MyInvois

0 / 5 answered

2.1

Is JR-Tech registered for **Sales Tax, Service Tax or both**? Which tax codes are used on equipment, installation and maintenance?

☐

2.2

Where is JR-Tech on **e-Invoice (MyInvois)**: live, which phase, and via SQL's connector or the LHDN portal?

☐

2.3

Do customers' invoices carry **TIN / BRN** today? How are walk-in or B2C sales handled: consolidated e-Invoice?

☐

2.4

Are you happy to **re-map to Odoo's standard Malaysian COA**, or must certain account codes stay for the auditor?

☐

2.5

Are **cost centres / departments** tracked (sales, technical, fabrication, rental) for P&L by division?

☐

discovery questions · 03 and 04

How you bill today, and the new rental model.

✓ Answered ⌚ Follow up Click a question to mark it

03

Billing: equipment & projects

Quote to cash today

0 / 5 answered

- 3.1

Who raises invoices today, and from what: **quotation, delivery order, job sheet or WhatsApp?**

☐
- 3.2

Do kitchen fit-out projects use **deposits, progress / milestone billing** or retention? What percentages?

☐
- 3.3

What are your standard **credit terms** (cash, 30, 60 days), and does any customer get special pricing or terms?

☐
- 3.4

Are **delivery and installation** billed separately or bundled into the equipment price?

☐
- 3.5

Are any sales or purchases in **foreign currency** (USD, RMB, SGD)? Do imports need landed-cost allocation?

☐

04

Rental & subscription billing

The new business model

KEY

0 / 5 answered

- 4.1

How is a robotic rental priced: **fixed monthly fee**, usage-based or tiered, and what does the fee include?

☐
- 4.2

Typical **contract length**, notice period and auto-renewal? Billed **in advance or in arrears**, and prorated mid-month?

☐
- 4.3

Is a **security deposit** taken? How are damage, late return or early termination charged?

☐
- 4.4

Do rental units stay **JR-Tech assets** (depreciated as a fleet), or are any sold as rent-to-own / hire purchase?

☐
- 4.5

Should maintenance visits under a subscription be **free, capped or chargeable** beyond a quota?

☐

discovery questions · 05 and 06

Cash in, cash out, and who needs what.

 Answered  Follow up Click a question to mark it

05

Collections, banks & payables

Cash in, cash out

0 / 4 answered

- 5.1

Which **banks and accounts** are used, and can statements be downloaded (CSV / OFX) for reconciliation?

☐
- 5.2

How do customers pay: **transfer, DuitNow / FPX, cheque, card**? Would you want auto-debit for subscriptions?

☐
- 5.3

Who chases overdue payments, and how? Would **automatic reminders** from Odoo be welcome?

☐
- 5.4

How are supplier bills **approved** before payment, and how are technician **expenses / petty cash** claimed today?

☐

06

Reporting, controls & people

Who needs what

0 / 4 answered

- 6.1

Which **monthly reports** does management read today (P&L, aging, cash flow, job profitability)?

☐
- 6.2

Who will use Odoo Accounting: **how many finance users**, and is an outside accountant or auditor involved?

☐
- 6.3

Do you need **approval limits** (for example discounts, refunds, bills above RM X) or segregation of duties?

☐
- 6.4

Should **technician commissions / KPI rewards** feed payroll from job data? Which payroll tool is used today?

☐

to prepare

Please bring, or send ahead.

Exports from SQL Account are fine as they are: **we clean and map them.**

 **Latest trial balance** and balance sheet (Excel) ☐

 **AR and AP aging** as at the last month-end ☐

 **Chart of Accounts** and tax-code list export ☐

 **Customer and supplier** master lists ☐

 **One sample invoice, DO** and quotation ☐

 **A draft or sample rental agreement** ☐

 **Fixed-asset register** (if kept) ☐

 **SST / MyInvois** registration details ☐
